1 Todo List

Member _csv< _T >::set_separator (const std::string &sSep)

```
Class _marker< _T > 
marker(const _marker<_T>&)
```

2 Class Documentation

2.1 _csv< _T > Class Template Reference

This is the templated _csv class, initialized with double by default. STL parallel execution policy does not provide enhancements for simple operations.

```
#include <csv.h>
```

Public Types

• enum eVerbose { QUIET, DEBUG }

Define verbosity values.

Public Member Functions

• _csv ()

Default constructor without parameters. These parameters must be set after by methods. It will rise lot of errors if something is missing.

• _csv (const std::string &sFilename, const char &cSep)

Constructor with two parameters such as the name of the working file and the separator character as usual with csv.

- _csv (const std::string &sFilename, const std::string &sSep)
- _csv (const std::vector< std::vector< _T >> &vvData)

Constructor fed with external data.

csv (const std::vector< std::string > &vsHeader, const std::vector< std::vector< T > > &vvData)

Constructor fed with external header and data.

_csv (const std::vector< std::string > &vsHeader, const std::vector< std::vector< _T > > &vvData, const char &cSep)

Constructor fed with external header and data.

• bool read ()

Read the content of the file given to the constructor using boost. It detects the header and data consistency with digit sequence: {0123456789eE+-. tab std::endl} and basic regex and dimension matching between header and data line. It is able to recover basic errors such as 'tab'==''. The method put NaN in the grid if an unrecoverable error appends. Data will be store in private variables.

• bool show () const

Show whole data, i.e. the header and data with no restriction on length or terminal size. It uses boost::format in order to correct spacing of number and strings.

· bool show (int iLine stop) const

Show the header and data until "line_stop" line. Print all columns with terminal end-of-line. It uses boost::format in order to correct spacing of number and strings.

• bool write ()

Write on disk what data are store.

const std::vector< _T > select_line (int line) const

Select the line "line" in data.

const std::vector< _T > select_column (int iCol) const

Select the column "col" in data.

- const std::vector< std::vector< _T >> select (int iLine_min, int iLine_max, int iCol_min, int iCol_max) const Select a sub grid in data, i.e. trim data to the rectangular $[i_{min}, i_{max}] \times [j_{min}, j_{max}]$.
- bool set data (const std::vector< std::vector< T >> &vvData)

Set data with a vector of a vector.

bool set_column (const std::vector< _T > &vCol, int iCol)

Set a column with a vector.

- bool set_row (const std::vector< _T > &vRow, int iRow)
- bool set_header (const std::vector< std::string > &vsHeader)

Set the header: the first line containing column name.

bool set_filename (const std::string &sFilename)

Set the filename for output or input. The fstream do not care about extension...

bool set_filename_out (const std::string &sFilename)

Set the filename for output. The fstream do not care about extension...

bool set separator (const char &cSep)

Set the csv separator. Usually: '\t', '', ';' ...

bool set_separator (const std::string &sSep)

Set the csv separator. Usually: '\t', '', ';' ...

void set_verbose (eVerbose evV)

Set the verbose mode for debug. It does not deactivate error raising.

• const std::string get_filename () const

Get the filename.

· const std::string get_filename_out () const

Get the output filename.

• const char get_separator () const

Get the separator.

const size_t get_header_size () const

Get size of the header.

const size_t get_data_size_i () const

Get data line size.

const size_t get_data_size_j () const

Get data column size.

const std::vector< std::vector< _T >> & get_data () const

Get data and return it as a vector of vector.

const std::vector< std::string > & get_header () const

Get column names and return it in a vector.

bool empty () const

Check if data are empty, and the emptiness of the first line, i.e. this->data[0].

bool check_dim ()

Check data dimension consistency, i.e. if all line dimensions are all equal.

- bool **genrandspec** (_T TMin, _T TMax, _T TStep)
- bool transform_lin (_T TA, _T TB, int iCol)

Do Y=aX+b to the iCol-column.

- bool shift (_T TVal)
- bool shift (T TVal, int iCol)
- bool apply_max_threshold (_T TVal)

Delete *i* line from the grid where data[i][j] > val.

bool apply_min_threshold (_T TVal)

Delete i line from the grid where data[i][j] < val.

bool apply_max_threshold (_T TVal, int iCol)

Delete i line from the grid where $data[i][j \neq list] > val$.

bool apply_min_threshold (_T TVal, int iCol)

Delete i line from the grid where $\mathbf{data}[i][j \neq list] < val$.

· void zeroize ()

Set to zero data. One should find this useful...

• void clear ()

Delete data and header.

- csv & operator= (const csv & other) const
- bool operator== (const _csv &other) const
- bool operator!= (const csv &other) const
- _csv & operator+ (const _csv &other) const

Sum with the 2nd column.

_csv & operator+ (const _T &other) const

Add a constant to the 2nd column.

_csv & operator- (const _csv &other) const

Sum with the 2nd column.

_csv & operator- (const _T &other) const

Substract a constant to the 2nd column.

_csv & operator* (const _csv &other) const

Inner product with the 2nd column.

_csv & operator* (const _T &other) const

Multiply by a constant the 2nd column.

• _csv & operator/ (const _csv &other) const

Divide element by element the two columns.

_csv & operator/ (const _T &other) const

Divide by a non zero constant the 2nd column.

2.1.1 Detailed Description

```
template<typename _{\rm T} = double> class _{\rm csv}<_{\rm T}>
```

This is the templated _csv class, initialized with double by default. STL parallel execution policy does not provide enhancements for simple operations.

2.1.2 Constructor & Destructor Documentation

```
2.1.2.1 _csv() [1/6]

template<typename _T = double>
_csv< _T >::_csv ( )
```

Default constructor without parameters. These parameters must be set after by methods. It will rise lot of errors if something is missing.

Default constructor

Constructor with two parameters such as the name of the working file and the separator character as usual with csv.

Constructor

Parameters

sFilename	string Name of the input or output file with extension
cSep	char Separator char between column

Parameters

sFilename	string Name of the input or output file with extension
sSep	string Separator char between column

```
2.1.2.4 _csv() [4/6]
template<typename _T = double>
```

Constructor fed with external data.

Parameters

```
vvData the data
```

```
2.1.2.5 _csv() [5/6]
```

Constructor fed with external header and data.

Parameters

vsHeader	The vector of column name	ı
vvData	the data	

```
2.1.2.6 _csv() [6/6]
```

Constructor fed with external header and data.

Parameters

vsHeader	the vector of column name
vvData	the data
cSep	char Separator char between column

2.1.3 Member Function Documentation

2.1.3.1 apply_max_threshold() [1/2]

Delete i line from the grid where $\mathbf{data}[i][j] > val$.

Parameters

Returns

true if all seems OK

2.1.3.2 apply_max_threshold() [2/2]

Delete i line from the grid where $\mathbf{data}[i][j \neq list] > val$.

Parameters

TVal	The max threshold
iCol	Select a column

Returns

true if all seems OK

2.1.3.3 apply_min_threshold() [1/2]

Delete i line from the grid where $\mathbf{data}[i][j] < val$.

Parameters

TVal The min threshold

Returns

true if all seems OK

2.1.3.4 apply_min_threshold() [2/2]

Delete i line from the grid where $\mathbf{data}[i][j \neq list] < val$.

Parameters

TVal	The min threshold
iCol	Select a column

Returns

true if all seems OK

2.1.3.5 check_dim()

```
template<typename _T = double>
bool _csv< _T >::check_dim ( )
```

Check data dimension consistency, i.e. if all line dimensions are all equal.

Returns

true if dimensions seem OK

```
2.1.3.6 empty()
```

```
template<typename _T = double>
bool _csv< _T >::empty ( ) const
```

Check if data are empty, and the emptiness of the first line, i.e. this->data[0].

Returns

true if data are empty

2.1.3.7 get_data()

```
\label{template} $$ \ensuremath{\sf template}$ $$ \ensurem
```

Get data and return it as a vector of vector.

Returns

```
std::vector<std::vector< T>>
```

2.1.3.8 get_data_size_i()

```
template<typename _T = double>
const size_t _csv< _T >::get_data_size_i ( ) const
```

Get data line size.

Returns

size t

2.1.3.9 get_data_size_j()

```
template<typename _T = double>
const size_t _csv< _T >::get_data_size_j ( ) const
```

Get data column size.

Returns

size_t

```
2.1.3.10 get_filename()
```

```
template<typename _T = double>
const std::string _csv< _T >::get_filename ( ) const
```

Get the filename.

Returns

std::string

```
2.1.3.11 get_filename_out()
```

```
template<typename _T = double>
const std::string _csv< _T >::get_filename_out ( ) const
```

Get the output filename.

Returns

std::string

2.1.3.12 get_header()

```
template<typename _T = double>
const std::vector< _T > & _csv< _T >::get_header ( ) const
```

Get column names and return it in a vector.

Returns

std::vector<_T>

2.1.3.13 get_header_size()

```
template<typename _T = double>
const size_t _csv< _T >::get_header_size ( ) const
```

Get size of the header.

Returns

size_t

2.1.3.14 get_separator()

```
template<typename _T = double> const char _{csv}< _T >::get_separator ( ) const
```

Get the separator.

Returns

char

2.1.3.15 read()

```
template<typename _T = double>
bool _csv< _T >::read ( )
```

Read the content of the file given to the constructor using boost. It detects the header and data consistency with digit sequence: {0123456789eE+-. tab std::endl} and basic regex and dimension matching between header and data line. It is able to recover basic errors such as 'tab'==' '. The method put NaN in the grid if an unrecoverable error appends. Data will be store in private variables.

Returns

true if all seems OK

2.1.3.16 select()

Select a sub grid in data, i.e. trim data to the rectangular $[i_{min}, i_{max}] \times [j_{min}, j_{max}]$.

Parameters

iLine_min	upper line i_{min}
iLine_max	lower line i_{max}
iCol_min	left column j_{min}
iCol max	right column j_{max}

Returns

```
std::vector<std::vector<_T>>
```

2.1.3.17 select_column()

Select the column "col" in data.

Parameters

```
iCol The column to select
```

Returns

```
std::vector<_T>
```

2.1.3.18 select_line()

Select the line "line" in data.

Parameters

```
iLine The line to select
```

Returns

```
std::vector<_T>
```

2.1.3.19 set_column()

Set a column with a vector.

Set a row with a vector.

Parameters

vCol	std::vector<_T> vCol
iCol	Select a column

Returns

true if all seems OK

Parameters

vRow	std::vector<_T> vRow
iRow	Select a row

Returns

true if all seems OK

2.1.3.20 set_data()

Set data with a vector of a vector.

Parameters

vvData	std::vector <std::vector<_t>> grid</std::vector<_t>
--------	--

Returns

true if all seems OK

2.1.3.21 set_filename()

Set the filename for output or input. The fstream do not care about extension...

Parameters

sFilename The filename with extension or not
--

Returns

true if all seems OK

2.1.3.22 set_filename_out()

Set the filename for output. The fstream do not care about extension...

Parameters

tension or not.	The filename with	sFilename
-----------------	-------------------	-----------

Returns

true if all seems OK

Here is the caller graph for this function:

2.1.3.23 set_header()

Set the header: the first line containing column name.

Parameters

vsHeader string vector

Returns

true if all seems OK

2.1.3.24 set_separator() [1/2]

Set the csv separator. Usually: '\t', ' ', ',', ';' ...

Parameters

cSep	The sep character: '\t' for tabulation
------	--

Returns

true if all seems OK

Here is the caller graph for this function:

```
2.1.3.25 set_separator() [2/2]
```

Set the csv separator. Usually: '\t', ' ', ',', ';' ...

Todo

Parameters

sSep The sep character: '\t' for tabulation

Returns

true if all seems OK

2.1.3.26 set_verbose()

Set the verbose mode for debug. It does not deactivate error raising.

Parameters

evV eVerbose::DEBUG for verbose mode and eVerbose::QUIET to keep quiet

Here is the caller graph for this function:

2.1.3.27 show() [1/2]

```
template<typename _T = double>
void _csv< _T >::show ( ) const
```

Show whole data, i.e. the header and data with no restriction on length or terminal size. It uses boost::format in order to correct spacing of number and strings.

Returns

true if all seems OK

2.1.3.28 show() [2/2]

Show the header and data until "line_stop" line. Print all columns with terminal end-of-line. It uses boost::format in order to correct spacing of number and strings.

Parameters

Returns

true if all seems OK

2.1.3.29 transform_lin()

```
template<typename _T = double>
bool _csv< _T >::transform_lin (
    _T TA,
    _T TB,
    int iCol )
```

Do Y=aX+b to the iCol-column.

Returns

true if all seems OK

2.1.3.30 write()

```
template<typename _T = double>
bool _csv< _T >::write ( )
```

Write on disk what data are store.

Returns

true if all seems OK

Here is the caller graph for this function:

The documentation for this class was generated from the following file:

csv.h

2.2 $_{\rm io}$ < $_{\rm T}$ > Class Template Reference

The purpose of this class is only to provide methods to read ascii or FITS spectrum, and to convert vector to valarray.

#include <waverage.hpp>

Classes

• struct vec

Define a (x,y) vector (seems better than std::pair)

Public Types

- typedef std::vector< std::valarray< std::valarray< _T > > Vvv
- typedef std::valarray< std::valarray< _T > > vv

Public Member Functions

- io (Vvv &VvvSpectr)
- bool read (std::string sFilename)
- bool read_dir (std::string sExtension)
- bool read_fits (std::string sFilename)
- bool read_fits_dir (std::string sExtension)
- bool read_fits_dir (std::string sDirectory, std::string sExtension)
- void show_data () const
- void show_data (int n) const
- void show_data (std::string sName) const
- · bool write () const
- bool write (std::string sFilename) const
- void set_fileIn (std::string sFilename)
- void set fileOut (std::string sFilename)
- void set_data (Vvv &VvvSpectr)
- void set_WaveScale (_T Scale)
- int get FileIndex (std::string sName) const
- const std::vector < vec > get vector () const
- const std::vector< std::vector< vec >> get_vectors () const
- const vv get valarray ()
- const Vvv get_valarrays ()

2.2.1 Detailed Description

```
template<typename \_T = double> class \_io< \_T >
```

The purpose of this class is only to provide methods to read ascii or FITS spectrum, and to convert vector to valarray.

2.2.2 Member Function Documentation

2.2.2.1 get FileIndex()

return the position of sName in vsFileList

2.2.2.2 get_valarray()

```
template<typename _T = double>
const vv _io< _T >::get_valarray ( )
```

convert vector to an valarray

```
2.2.2.3 get_vector()
template<typename _T = double>
const std::vector<vec> _{io}< _{T} >::get_vector ( ) const
get spectrum
2.2.2.4 get_vectors()
template<typename _T = double>
const std::vector<std::vector<vec> > _io< _T >::get_vectors ( ) const
get spectra
2.2.2.5 read()
template<typename _T = double>
bool _io< _T >::read (
             std::string sFilename )
read one file
2.2.2.6 read_dir()
template<typename _T = double>
bool _{io}< _{T} >::read_dir (
             std::string sExtension )
read the whole directory, only need the extension of files
2.2.2.7 read_fits()
template<typename _T = double>
bool _{io}< _T >::read_fits (
             std::string sFilename )
convert fits to vectors
2.2.2.8 set_fileIn()
template<typename _T = double>
void _{io}< _T >::set_fileIn (
             std::string sFilename )
```

set the input file name

```
2.2.2.9 set_fileOut()
template<typename _T = double>
void _io< _T >::set_fileOut (
             std::string sFilename )
set the output name
2.2.2.10 set_WaveScale()
template<typename _T = double>
void _io< _T >::set_WaveScale (
             _T Scale )
multiply wavelength by Scale
2.2.2.11 show_data() [1/3]
template<typename _T = double>
void _{io}< _T >::show_data ( ) const
show a spectrum
2.2.2.12 show_data() [2/3]
template<typename _T = double>
void _io< _T >::show_data (
             int n ) const
show spectrum n
2.2.2.13 show_data() [3/3]
template<typename _T = double>
void _io< _T >::show_data (
             std::string sName ) const
show spectrum sName
2.2.2.14 write() [1/2]
template<typename _T = double>
```

write the results

bool $_{io}$ < $_{T}$ >::write () const

2.2.2.15 write() [2/2]

write the results

The documentation for this class was generated from the following file:

waverage.hpp

2.3 _log Class Reference

Public Member Functions

_log (char **argv, const std::string &sFilename)

Initialize with the first argument of the command line, and the log name.

- · const std::string get_execname () const
- const std::string get_logname () const
- · const std::string get_historyname () const
- bool set_execname (char **argv)
- bool set_logname (const std::string &sFilename)
- bool **set_historyname** (const std::string &sFilename)
- bool write (const std::string &sS)

Write a string in the log file.

- bool write (const std::stringstream &ssS)
- bool write_history (const boost::program_options::variables_map &vm)

Write history file with information from boost::program_options.

• bool remove_duplicate ()

Remove duplicates in history file.

The documentation for this class was generated from the following files:

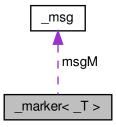

- log.h
- · log.cpp

2.4 _marker< _T > Class Template Reference

A class to plot spectra with line markers using py matplotlib.

```
#include <marker.h>
```

Collaboration diagram for _marker< _T >:

Classes

struct Line

Define a line.

Public Types

typedef std::vector< Line > vIList

Public Member Functions

- void **set_verbose** (const bool bVerbose)
- bool set_data (const std::vector< _T > &vTX, const std::vector< _T > &vTY)
- bool set_title (const std::string &sTitle)
- bool set_label (const std::string &sLabel)
- bool set_xlabel (const std::string &sXlabel)
- bool set_ylabel (const std::string &sYlabel)
- bool set_xunit (const std::string &sXunit)
- bool set_yunit (const std::string &sYunit)
- bool **set_output** (const std::string &sFilename)
- bool set_output (const std::string &sFilename, const int iDpi)

Set the picture filename with the extension (png, pdf, jpeg...) and the density (iDpi>50)

bool set_continuum (const _T TContinuum)

Set the continuum position and therefore ymax. Default is y=1.

bool set_supp (const _T TXmin, const _T TXmax)

Set the support of the first spectrum.

- bool set_xmin (const _T TXmin)
- bool set_xmax (const _T TXmax)
- bool set_ymin (const _T TYmin)
- bool set ymax (const T TYmax)
- bool set_figsize (int iHeight, int iWidth)
- void set_colorline (const std::string &sColor)

Set the color of the first curve.

- bool set_linewidth (float fWidth)
- bool set_titlesize (int iSize)
- bool set_labelsize (int iSize)
- bool set ticklabelsize (int iSize)
- bool set_annotatesize (int iSize)

Set the font size of markers.

- bool set_legendsize (int iSize)
- void set legend (bool bLegend)

Enable or disable the legend.

• void set_halfbox (bool bHalfbox)

Show only left and bottom axis.

- bool **set_continnumsize** (float fWidth)
- void set_showgrid (bool bShowgrid)
- void set dotted (bool bDotted)

Set secondary curves with dotted-style.

void set_dotdashed (bool bDotdashed)

Set secondary curves with dot-dashed-style.

void set_wide (bool bWide)

Define if the spectrum range is wide in order to reduce marker size with no overlaps.

bool set scriptname (const std::string &sScriptname)

Set the name of the py script. Default is .plot.py.

bool set_log (const std::string &sLog)

Enable or disable log file. Default is .marker.log.

• bool add_line (_T TWI, const std::string &sName)

Add a marker with a name on the figure.

• bool add line (T TWI, const std::string &sName, bool bBold)

Add a marker with a name on the figure. bBold determines if the line must be highlighted.

bool add_data (const std::vector< _T > &vTX, const std::vector< _T > &vTY)

Add an additionnal spectrum which has to be plot.

bool add_data (const std::vector< _T > &vTX, const std::vector< _T > &vTY, const std::string &sLabel)

Add an additionnal spectrum which has to be plot.

- _T get_continuum () const
- const std::pair< _T, _T > get_supp ()

Get the support of the first spectrum.

- const std::string & get_scriptname ()
- const std::string & get_output ()
- const std::string & get_title () const
- · const std::string & get_label () const
- const std::string & get_xlabel () const
- const std::string & get_xunit () const

```
· const std::string & get_ylabel () const
```

- const std::string & get_yunit () const
- const std::pair< int, int > get_figsize () const

Get the defined figsize, if defined. First: Height and Second: Width.

- int get_dpi () const
- bool make ()

Write spectra, write script with markers.

• int plot ()

Run the py script?

Static Public Member Functions

static bool sort_elemlist (const std::string &sElemlist)
 Sort the elemlist.

Protected Attributes

• _msg msgM

2.4.1 Detailed Description

```
template<typename _T = float> class _marker< _T >
```

A class to plot spectra with line markers using py matplotlib.

```
Todo marker(const _marker<_T>&)
```

2.4.2 Member Function Documentation

2.4.2.1 get_figsize()

```
template<typename _T = float>
const std::pair< int, int > _marker< _T >::get_figsize ( ) const
```

Get the defined figsize, if defined. First: Height and Second: Width.

Returns

std::pair of 2 int

2.4.2.2 get_supp()

```
template<typename _T = float> const std::pair< _T, _T > _marker< _T >::get_supp ( )
```

Get the support of the first spectrum.

Returns

```
std::pair of 2 _T: [ x_{min} x_{max}]
```

2.4.2.3 set_colorline()

Set the color of the first curve.

Parameters

```
sColor A string like "red", "green", "blue" or and a rgba hex string like "#rrggbbaa"
```

2.4.2.4 set_output()

Set the picture filename with the extension (png, pdf, jpeg...) and the density (iDpi>50)

Parameters

sFilename	Picture name
iDpi	Density

2.4.2.5 set_supp()

```
template<typename _T = float>
bool _marker< _T >::set_supp (
```

```
const _T TXmin,
const _T TXmax )
```

Set the support of the first spectrum.

Parameters

TXmin	x_{min}
TXmax	x_{max}

2.4.3 Member Data Documentation

2.4.3.1 msgM

```
template<typename _T = float>
_msg _marker< _T >::msgM [protected]
```

Interface to print message to std output

The documentation for this class was generated from the following file:

· marker.h

2.5 _msg Class Reference

A class that sends string to std output and in a file...

```
#include <msg.h>
```

Public Types

enum eMsg { START, MID, END, ERROR, THREADS }

enum for method in order to define whether the message is at the begin, at the end or an error,

Public Member Functions

```
    msg (const msg &other)
```

bool msg (const std::string &sMsg)

Send a message with eMsg::MID as default.

bool msg (eMsg emType, const std::string &sMsg)

Send a message...

bool error (const std::string &sMsg)

Send an error message...

• template<typename ... Args>

bool msg (const Args &...args)

A variadic formatter method that indeed sends arbitratry number of variable to the std output... with eMsg::MID as default.

• template<typename ... Args>

```
bool msg (eMsg emType, const Args &...args)
```

A variadic formatter method that indeed sends arbitratry number of variable to the std output... The first parameter is always the enum eMsg.

• template<typename ... Args>

```
bool error (const Args & ... args)
```

A variable to the std error output... with eMsg::ERROR as default.

bool set_name (const std::string sName)

Set the name of the main instance.

bool set_threadname (const std::string sName)

Set the name of threads.

• bool set_log (const std::string sLog)

Enable or disable log file.

void enable_log (bool bLog)

Enable or disable the log file.

2.5.1 Detailed Description

A class that sends string to std output and in a file...

2.5.2 Member Function Documentation

2.5.2.1 msg()

Send a message...

Parameters

етТуре	See enum
	eMsg::

The documentation for this class was generated from the following files:

- msg.h
- · msg.cpp

2.6 _op< _T > Class Template Reference

This class is a set of spectrum manipulation methods. It is work with std::valarray. everything.

```
#include <waverage.hpp>
```

Public Types

- typedef std::valarray< std::valarray< _T > > Vvv
- typedef std::valarray< std::valarray< _T >> vv
- typedef std::vector< std::vector< _T >> VV

Public Member Functions

- _op (Vvv &VvvSpectr)
- bool resize_spectr ()
- bool rebuild_wlStep ()
- void remove_zero ()
- bool filter_SG (int n)
- bool filter_SG ()
- const vv & compute_mean () const
- const vv & compute_wmean () const
- std::pair< _T, _T > get_wlRange (int n) const
- std::pair < _T, _T > get_wlRangeMin () const
- void set data (Vvv &VvvSpectr)
- bool write (_io< _T > &ioInterface)

2.6.1 Detailed Description

```
template < typename _{\rm T} = double > class _{\rm op} < _{\rm T} >
```

This class is a set of spectrum manipulation methods. It is work with std::valarray. everything.

2.6.2 Member Function Documentation

2.6.2.1 compute_mean()

```
template<typename _T = double>
const vv& _op< _T >::compute_mean ( ) const
```

compute arithmetic mean

2.6.2.2 compute_wmean()

```
template<typename _T = double> const vv& _{op}< _T >::compute_wmean ( ) const
```

compute weighted arithmetic mean

2.6.2.3 filter_SG() [1/2]

Savitzky-Golay on spectrum n.

2.6.2.4 filter_SG() [2/2]

```
template<typename _T = double>
bool _op< _T >::filter_SG ( )
```

Savitzky-Golay on all spectra n.

2.6.2.5 get_wlRange()

```
template<typename _T = double> std::pair<_T, _T> _op< _T >::get_wlRange ( int n ) const
```

get the minimum and maximum wavelength

2.6.2.6 get_wlRangeMin()

```
template<typename _T = double>
std::pair<_T, _T> _op< _T >::get_wlRangeMin ( ) const
```

return the smallest support

2.6.2.7 rebuild_wlStep()

```
template<typename _T = double>
bool _op< _T >::rebuild_wlStep ( )
```

rebuild wavelength axis.

2.6.2.8 remove_zero()

```
template<typename _T = double>
void _op< _T >::remove_zero ( )
```

trim spectra where flux is 0 (assuming zeros are at the beginning or the end).

2.6.2.9 resize_spectr()

```
template<typename _T = double>
bool _op< _T >::resize_spectr ( )
```

resize all spectra to the same size (maximal).

2.6.2.10 set_data()

set external spectra.

2.6.2.11 write()

```
template<typename _T = double>
bool _op< _T >::write (
    _io< _T > & ioInterface )
```

write the data using a _io class.

The documentation for this class was generated from the following file:

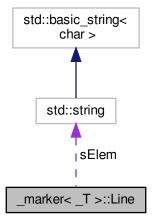

· waverage.hpp

2.7 _marker< _T >::Line Struct Reference

Define a line.

#include <marker.h>

Collaboration diagram for _marker< _T >::Line:

Public Attributes

- _T TWI
- std::string sElem
- bool bBold

2.7.1 Detailed Description

template<typename _T = float> struct _marker< _T >::Line

Define a line.

The documentation for this struct was generated from the following file:

· marker.h

2.8 _io< _T >::vec Struct Reference

Define a (x,y) vector (seems better than std::pair)

```
#include <waverage.hpp>
```

Public Attributes

- _T x
- _T y
- T SNR =-1

2.8.1 Detailed Description

```
template<typename _T = double> struct _io< _T >::vec
```

Define a (x,y) vector (seems better than std::pair)

The documentation for this struct was generated from the following file:

· waverage.hpp

3 File Documentation

3.1 csv.h File Reference

A basic class for csv manipulation.

```
#include <iostream>
#include <fstream>
#include <chrono>
#include <cmath>
#include <numeric>
#include <random>
#include <cstdarg>
#include <vector>
#include <algorithm>
#include <functional>
#include <iterator>
#include <string>
#include <iomanip>
#include <regex>
#include <boost/spirit/include/qi_parse.hpp>
#include <boost/spirit/include/qi_numeric.hpp>
#include <boost/tokenizer.hpp>
```

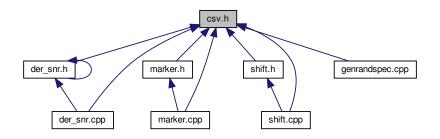

3.1 csv.h File Reference 35

#include "csv.tpp"

Include dependency graph for csv.h:

This graph shows which files directly or indirectly include this file:

Classes

class _csv< _T >

This is the templated _csv class, initialized with double by default. STL parallel execution policy does not provide enhancements for simple operations.

3.1.1 Detailed Description

A basic class for csv manipulation.

3.2 der_snr.cpp File Reference

An C++ implementation of the der_snr fortran code from: F. Stoehr et al: DER_SNR: A Simple & General Spectroscopic Signal-to-Noise Measurement Algorithm,

394, Astronomical Data Analysis Software and Systems (ADASS) XVII 2008ASPC..394..505S.

```
#include <iostream>
#include <cstdlib>
#include <cstdio>
#include <fstream>
#include <vector>
#include <algorithm>
#include <string>
#include <cmath>
#include <functional>
#include <thread>
#include <future>
#include <tuple>
#include <chrono>
#include <boost/program_options.hpp>
#include <csv.h>
#include <msq.h>
#include <log.h>
#include <der snr.h>
```

Include dependency graph for der_snr.cpp:

Functions

int main (int argc, char **argv)

3.2.1 Detailed Description

An C++ implementation of the der_snr fortran code from: F. Stoehr et al: DER_SNR: A Simple & General Spectroscopic Signal-to-Noise Measurement Algorithm,

394, Astronomical Data Analysis Software and Systems (ADASS) XVII 2008ASPC..394..505S.

Remove value under a threshold in a folder or in a file. This code is multi-threaded or not if not available.

Author

Audric Lemonnier

Version

Date

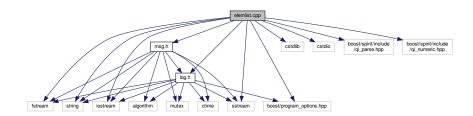

18/04/2020

3.3 elemlist.cpp File Reference

Add a line to the elemlist.

```
#include <iostream>
#include <cstdlib>
#include <cstdio>
#include <fstream>
#include <string>
#include <sstream>
#include <boost/program_options.hpp>
#include <boost/spirit/include/qi_parse.hpp>
#include <boost/spirit/include/qi_numeric.hpp>
#include <msg.h>
#include <log.h>
```

Include dependency graph for elemlist.cpp:

Macros

- #define LOGFILE ".elemlist.log"
- #define HISTFILE ".history"

Functions

template<typename _T = std::string>
bool add_elem (const std::string &sElem, _T TWI, const std::string &sFilename)

Add a line to a file.

template<typename _T = std::string>
 bool add_elem (const std::string &sSymbol, const std::string &sElem, _T TWI, const std::string &sFilename)
 Add a line to a file, with the indicator symbol.

bool is_float (const std::string &sVal)

Determine if a string is a number.

int main (int argc, char **argv)

3.3.1 Detailed Description

Add a line to the elemlist.

Author

Audric Lemonnier

Version

0.1

Date

30/03/2020

3.3.2 Macro Definition Documentation

3.3.2.1 HISTFILE

```
#define HISTFILE ".history"
```

Define the default histfile (shared)

3.3.2.2 LOGFILE

```
#define LOGFILE ".elemlist.log"
```

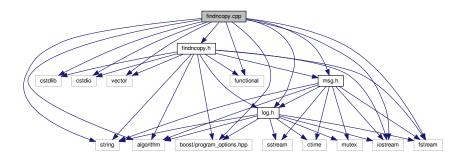

Define the default logfile

3.4 findncopy.cpp File Reference

Copy files from a list in a new folder.

```
#include <iostream>
#include <cstdlib>
#include <cstdio>
#include <fstream>
#include <vector>
#include <string>
#include <algorithm>
#include <functional>
#include <boost/program_options.hpp>
#include <msg.h>
#include <log.h>
```

#include <findncopy.h>
Include dependency graph for findncopy.cpp:

Macros

- #define LOGFILE ".findncopy.log"
- #define HISTFILE ".history"

Functions

• int **main** (int argc, char **argv)

3.4.1 Detailed Description

Copy files from a list in a new folder.

Author

Audric Lemonnier

Version

0.1

09/03/2020

3.4.2 Macro Definition Documentation

3.4.2.1 HISTFILE

```
#define HISTFILE ".history"
```

Define the default histfile (shared)

3.4.2.2 LOGFILE

```
#define LOGFILE ".findncopy.log"
```

Define the default logfile

3.5 genrandspec.cpp File Reference

Generate a set of randomized-flux spectra between two wavelengths for test purposes.

```
#include <iostream>
#include <cstdlib>
#include <cstdio>
#include <fstream>
#include <vector>
#include <algorithm>
#include <numeric>
#include <string>
#include <cmath>
#include <random>
#include <thread>
#include <future>
#include <ctime>
#include <tuple>
#include <chrono>
#include <boost/program_options.hpp>
#include <csv.h>
#include <msg.h>
#include <log.h>
```

Include dependency graph for genrandspec.cpp:

Macros

- #define LOGFILE ".genrandspec.log"
- #define HISTFILE ".history"
- #define MaxFilepDir 10

Set the maximum number of files to create in a folder.

Functions

- void run (const std::string &sOutput, char cSep, float fMinw, float fMaxw, float fStep)
 Write random spectra on disk.
- double long CPU_utilization ()
- std::tuple< double long, double long > get_stat ()
- int main (int argc, char **argv)

3.5.1 Detailed Description

Generate a set of randomized-flux spectra between two wavelengths for test purposes.

Author

Audric Lemonnier

3.5.2 Macro Definition Documentation

3.5.2.1 HISTFILE

```
#define HISTFILE ".history"
```

Define the default histfile (shared)

3.5.2.2 LOGFILE

```
#define LOGFILE ".genrandspec.log"
```

Define the default logfile

3.5.2.3 MaxFilepDir

```
#define MaxFilepDir 10
```

Set the maximum number of files to create in a folder.

MaxFilepDir

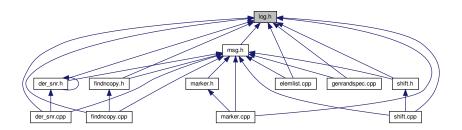

3.6 log.h File Reference

A class to write log file.

```
#include <iostream>
#include <fstream>
#include <string>
#include <sstream>
#include <ctime>
#include <algorithm>
#include <mutex>
#include <boost/program_options.hpp>
Include dependency graph for log.h:
```

3.9 shift.cpp File Reference

Include dependency graph for shift.cpp:

Shift whole spectrum by a given wavelength. This code is multi-threaded or not if not available.

```
#include <iostream>
#include <vector>
#include <algorithm>
#include <thread>
#include <future>
#include <string>
#include <tuple>
#include <chrono>
#include <boost/program_options.hpp>
#include <boost/range/iterator_range.hpp>
#include <msg.h>
#include <log.h>
#include <shift.h>
```

Macros

```
• #define CLIGHT 299792.458
```

```
• #define LOGFILE ".shift.log"
```

• #define HISTFILE ".history"

Functions

• int main (int argc, char **argv)

3.9.1 Detailed Description

Shift whole spectrum by a given wavelength. This code is multi-threaded or not if not available.

Author

Audric Lemonnier

Version

0.3

3.9.2 Macro Definition Documentation

3.9.2.1 HISTFILE

#define HISTFILE ".history"

Define the default histfile (shared)

3.9.2.2 LOGFILE

#define LOGFILE ".shift.log"

Define the default logfile

3.10 waverage.cpp File Reference

Compute average of spectra from FITS weighted by the SNR or the exposition time.

```
#include <iostream>
#include <fstream>
#include <cmath>
#include <string>
#include <sstream>
#include <iomanip>
#include <algorithm>
#include <vector>
#include <valarray>
#include <tuple>
#include <waverage.hpp>
```

Include dependency graph for waverage.cpp:

Functions

• int main (int argc, char **argv)

3.10.1 Detailed Description

Compute average of spectra from FITS weighted by the SNR or the exposition time.
